

**Condé Nast**, the first magazine publisher to offer digital magazines on the iPhone and iPad, partnered with Safecount, a leading digital data collection company, to conduct the first stage of a multi-phase research initiative evaluating consumer engagement. Safecount played an integral role in the setup and collection of data from more than 5,000 in-app iPad surveys. Brands included in the study were *GQ*, *Vanity Fair*, *Wired*, and *Glamour*.

Condé Nast's tablet research was the first of its kind in a new wave of methodologies to understand consumer usability, expectations, and sentiment. It also conceived a best practice guide for creating engaging advertising on the tablet. Some of the key findings from the survey included:

- Initial releases of digital editions attracted readers familiar with the print magazine (3/4 identified as subscribers and/or newsstand buyers)
- 4 out of 5 of those surveyed were likely to download the next month's issue
- The majority (84%) said the apps met or exceeded their expectations
